PARADOR

Product features

Parador real wood floors impress with their outstanding quality, intelligent technology and a unique look provided by different surface treatments and a perfect installation pattern.

Automatic click®system

Patented click system with long and end edge locking – quickly and safely installed with just one click.

All-round click system

Innovative all-round click system without left-hand or right-hand planks for a particularly easy installation.

Tongue and groove connection

All-round tongue and groove connection for an easy continuous installation.

Swell protection

The impregnation of the lamellars, top layers and the individual plank edges ensures optimal swell protection.

All-round bevel

All-round bevelled long and end edges – every single plank is emphasised.

Hand-finished

Finishing every plank by hand or with a plane gives the floor an original character.

Untreated

No surface treatment. Time is quicker to take effect on the wood, generating a fascinating patina.

Lacquer finished

A refined, silky gloss lacquer finish provides ideal protection against dirt and wear.

White lacquer finish

In addition to lacquer finished: colour and textural nuances in the wood are compensated by white colouring.

Matt lacquer finish

The protective lacquer finish with the natural matt look of an oil treatment emphasises the colour and texture.

Matt white lacquer finish

In addition to matt lacquer finished: colour and textural nuances in the wood are compensated by white colouring.

Naturally oiled

The original character of the wood is brought out. The wood's own patina develops with optimal protection.

Naturally oiled white

In addition to naturally oiled: colour and textural nuances in the wood are compensated by white colouring.

Oil impregnation

The dirt-repellent surface with a matt appearance provides optimal protection.

Oil impregnation white

In addition to oil impregnation: colour and textural nuances in the wood are compensated by white colouring.

Art of living meets performance demand

Performance is a permanent feature of our life. Day after day, performance is demanded from us. Delivering performance on a daily basis requires solid ground beneath our feet. For us, the art of living is an appreciation of beauty and to create inspiration out of it at any moment in time.

Real wood floors enhance the value of living spaces in a visible manner. The natural material wood lends warmth and comfort to any room and provides the perfect foundation for tasteful and stylish furnishing. Numerous selected timbers, various plank formats and installation patterns as well as different assortments and surface finishes open up a unique spectrum for exclusive flooring design. Whether traditional or fashion-conscious – all Parador real wood floors are timeless in their quality standard.

What we value

As a wood processing company, we are aware of our particular responsibility for the environment and towards handling natural resources in a sustainable manner. That is why we opted in 2004 for certification according to the two best-known systems for sustainable forestry, the FSC® and PEFC. This documents how responsible we are when dealing with the valuable material that is wood. The wood and wood materials processed come from sustainably managed forests and monitored sources of supply. We feed wood waste back into biomass thermal power stations, thus generating renewable energy. In the production of our laminate floors and panels, only organic dyes are used for printing the decor papers. All our products are regularly tested by independent institutes for their environmental impact and have been found to be good, meaning that we can apply the „Blue Angel“ seal of approval among others. In order to meet our high ecological and quality standards, we develop and produce exclusively in Germany and Austria, thus ensuring that our products meet your and our high standards in terms of quality and sustainability. This also applies to our new vinyl range, which is not only distinguished by the sensitive purchase of relevant raw materials, but can also be declared to be „made in Germany“.

Classic Engineered Wood Flooring

Parador Classic engineered wood flooring offers fascination in its most classic form. Thanks to their timeless looks and elegance combined with quality and stability due to a 14 mm installation height, the floors in this collection are ideally suited for making traditional and modern furnishing styles a reality. Despite a high level of refined restraint, engineered wood Classic nevertheless opens up great scope for individual design. Fine timbers in various assortments, in wide-plank and block formats plus other attractive wood looks, offer a wide spectrum of colour and textural nuances, which are further enhanced by the type of surface treatment.

Trendtime Engineered Wood Flooring

Trendtime engineered wood flooring stands for contemporary, modern flooring design and offers a plethora of unconventional design options. At the pinnacle of international interior design culture, Trendtime engineered wood flooring turns current trends into exclusive engineered wood floors that make every room distinctive. For example, with brushed and sawn surfaces and with planks made of historic old wood, which fully bring out the natural quality and durable beauty of the material. Individually hand-finished by specialists, the Trendtime 8 surfaces highlight natural wood features and looks. Besides a variety of fine timbers in different ranges, various plank formats and installation patterns address every individual desire with Trendtime. Sophisticated surface treatments give the engineered wood floors in this collection an even greater character and natural look.

Classic Solid Wood Flooring

Solid wood floors create a natural and vivid home atmosphere lasting for generations and can be harmoniously combined with both classic and modern style elements. Very up-to-date are the brushed surfaces, which highlight the natural quality of the refined hard and softwoods in terms of look and feel. With their natural and timeless beauty, Parador solid wood flooring provides a durable basis for exclusive furnishing that retains its value.

👉 All naturally oiled surfaces have a brushed texture.

Surfaces

Assortments

As a natural, living material, no two timbers are the same. The timber of one and the same type can have very different characteristics, which reflect the whole spectrum of nature and the authenticity of the material – from a calm and harmonious wood character to a lively and expressive one. The choice of assortment therefore also makes it possible to underline personal preferences and individual furnishing styles.

Select

The harmonious texturing and delicate shades allow exceptionally tranquil and sophisticated flooring to be created with the Select assortment.

Natur

For a floor design with a natural yet balanced overall effect, the Natur assortment offers the best foundation.

Classic

The Classic assortment features a lively spectrum between a harmonious, natural and an earthy look.

Living

The Living assortment is distinguished by a lively appearance and underlines the earthy character of the timber.

Rustikal

With a knotty look, a distinctive play of colours and an obvious grain, the Rustikal assortment has a particularly natural, earthy effect.

Surface treatments and texture

Various types of surface treatment allow the radiance of the floor to be enhanced by additional facets and emphasise its natural exclusive quality. Brushed, sawn and hand-finished surface textures underline the authentic character of the wood as a natural material.

Untreated

Floors without surface treatment are intended for an individual finish applied on site. However, as a matter of principle, there is no need to treat the surface at all. In this case, time is quicker to take effect on the wood, generating a fascinating patina.

Lacquer finished

Applying a lacquer finish gives the floor a sophisticated, silky gloss surface and ideal protection against dirt and mechanical stress. The 100% solvent-free lacquer finish consisting of several UV hardened layers is fully closed, yet still brings out the fine wood grain.

Matt lacquer finish

A matt lacquer finish combines the protective benefits of a lacquer seal with the natural look of a treatment with oil. The colour and texture of the wood are emphasised, whilst it retains its natural matt radiance. The 100% solvent-free lacquer finish consisting of several UV-hardened layers is fully closed, but the fine wood grain is retained.

White lacquer finish

This 100% solvent-free lacquer finish, due to the fully closed lacquer finish consisting of several UV-hardened layers, provides the full protection of a seal with lacquer. The gentle colouring compensates for textural and colour nuances in the wood, thus creating a particularly harmonious look.

Lacquer finish white matt

In addition to the properties of the matt lacquer finish, the white colouring compensates for the textural and colour nuances in the wood.

Natural oil finish

This oil treatment highlights the original, authentic character of the wood in a natural and unadulterated way. The wood is able to develop its own patina, but is also protected at the same time. Subsequently treating or renovating the surface with natural oil can be easily done at any time.

White natural oil finish

The white natural oil finish protects the wood without fully closing the surface. The wood therefore appears in its most natural form and at the same time is also able to develop its own patina, whilst the light colouring of the oil compensates for differences in colour and structure. Subsequently treating or Renovating the surface with natural oil can be easily done at any time.

Oil impregnation

Oil impregnation combines the benefits of the dirt-repellent lacquer finish with the natural look of an oiled floor. The deep impregnation and hardening with UV light gives the wood optimal protection without being sealed. Its open-pored structure and natural matt radiance are retained.

Oil impregnation white

White oil impregnation provides the floor with all the advantages of treatment with oil. The deep impregnation and hardening with UV light gives the wood optimal protection without being sealed. The discreet colouring compensates for differences in colour and structure and creates a particularly calm, harmonious look.

Hand-finished – Handscraped

Specialists finish every single plank individually by hand with the attention of traditional craftsmanship. When it comes to making Parador » handscraped «, manual planing gives the floor a very original, authentic character.

Hand-finished – Elephant Skin

Wood features like grains, knots and cracks are treated by the craftsman and presented in detail. The handmade » elephant skin « surface enhances the unique character of a plank. The result is an almost historic-looking floor.

Rough sawn

Besides the distinctive texture of the wood, the surface is characterised by the sawtooth marks running across the planks. The constantly fluctuating sawing intensity makes every single plank an unmistakable individual item.

Brushed

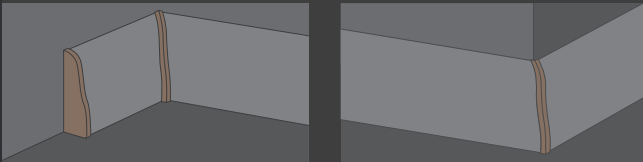

Treating the wood surface with stainless steel brushes makes the natural wood grain more intense. The wood texture is not only visible, but also provides an authentic feel.

Accessories

Skirtings with engineered and solid wood flooring

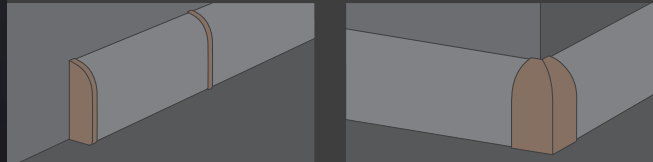

For perfect, harmoniously designed finishes, Parador offers a wide choice of elegant and functional skirtings for engineered and solid wood flooring. Thanks to different shapes and timbers, the skirtings can be ideally matched to the floor in question. With their patented clip technology, the skirtings also make assembly much easier. They are simply pushed onto special clips and can therefore be easily removed at any time.

End profiles Type 1

Interior and exterior corners for skirtings SL 2 and SL 4. Available in aluminium or gold look.

End profiles Type 2

Interior and exterior corners for skirtings SL 2 and SL 4. Available in a choice of maple, aluminium, gold or smoked oak look.

Moulding clips

Clips (red) for SL 4, SL 17 and SL 18 with 5 mm cable routing depth for loudspeaker and telephone cables.

Clips (green) for SL 2 with a cable routing depth of 10 mm for power or antenna cables.

Underlays for engineered and solid wood flooring

The underlay creates the perfect foundation for laying your new Paradorfloor and brings valuable functional features to the flooring design. It compensates for slight uneven patches in the substrate and ensures the required moisture protection on mineral substrates. Special acoustic underlays reduce ambient and impact noise, in other words the noise that the floor transmits to the room itself or to the room below when walking on it. That improves the room's acoustics and reduces disturbance from noise. Parador offers you a comprehensive range of high quality underlays, which are ideally suited for various installation situations and purposes.

Uno-Protect

The highly resilient underlay for all dry substrates.

Duo-Protect

The 2-in-1 underlay with moisture protection and impact noise insulation combined.

Plan-Protect

The practical impact noise underlay made of natural wood fibres.

Akustik-Protect 100

The high-tech acoustic mat offering ambient noise and impact noise insulation with damp and moisture protection.

Akustik-Protect 200

The high-tech acoustic mat offering ambient noise and impact noise insulation without a moisture barrier.

Akustik-Protect 300

The high-tech acoustic mat.
